

Mycoscience Labs

Rob Whalen, a UCONN graduate with a Masters in Microbiology, formed Mycoscience in 1990. He has 10 employees, half of whom live in Willington. Some of his employees also attended UCONN. Rob's high-tech business is truly locally grown.

Since it began, Mycoscience Labs has provided the scientific medical community with quality laboratory and consulting services. Their modern laboratory with state of the art equipment is located in Willington at 25 Village Hill Road, which is adjacent to the I-84 corridor between Boston and New York. Mycoscience lab personnel have decades of microbiological experience and training.

Mycoscience specializes in the research, evaluation and qualification of medical products regulated by the U.S. Food and Drug Administration. This expertise with FDA regulations combined with extensive laboratory skills enables them to navigate customer products smoothly through regulatory channels. Their facility is FDA registered in addition to being ISO 13485:2003 certified.

When it comes to meeting medical device, pharmaceutical, and in-vitro diagnostic regulations, Mycoscience has extensive experience, not only with FDA standards but with EN and ISO requirements as well.

Mycoscience offers environmental testing of airborne, surface, and water microbial levels. They provide testing, certification, and monitoring of viable and non-viable particulates in both medical device and pharmaceutical environments.

For more information on Mycoscience and the services they provide visit their website (www.mycoscience.com). They can be reached by email (mycosci@mindspring.com) or by phone (860.684.0030).
