

Stavens Bros., Inc.

Stavens Bros., Inc. (Stavens) has been serving Connecticut since 1947 making it one of the oldest businesses in town. Two brothers, Robert and Richard Stavens, founded the family owned business with one Cable Tool Rig and a passion for drilling top quality water wells. Over the years their business expanded and production was increased with new and innovative technology such as Rotary Drills and Pneumatic Hammers. Stavens found that by also using the old Cable Tool Rigs to “pound or chop” rotary-drilled wells dramatically increased water production. The Stavens team has a well drilling success rate of more than 99%.

The business, now run by Robert’s son Joe, has over 100 years of combined experience in the water well drilling. They currently have 5 employees who reside in Willington or surrounding communities. They specialize in the installation of water wells, geothermal wells, hydrofracture and reserve and booster systems, as well as pump and tank service and water treatment systems. Stavens is fully insured and has thousands of satisfied customers in Tolland, Windham, Hartford, Middlesex and nearby counties.

Stavens is located at 191 River Road. Business hours are Monday – Friday, 7:00 am to 5:30 pm. Call for an appointment at (860) 429-1740 or visit their website – www.stavenbros.com. They also offer emergency services on weekends if an unexpected problem arises.

Well Drilling and Pumping Services include:

- Water well drilling
- Water pump installation
- Well tank installation
- Well problem troubleshooting
- Well system repairs
- Well surging to reduce blockage
- Pump, tank, and system sales
- Water filter installation
- Pressure boosting

The Stavens team will determine the ideal location for you new well and ensure that it meets all state guidelines and regulations. Once they find the right spot, they will drill a customized well perfect for your requirements and match it with a suitable pump system.

They also offer complete system enhancements for water pressure and clarity, as well as full repairs for existing systems. The experts at Stavens will diagnose the problem with your well and recommend solutions and pricing that will get your water back up and running to your satisfaction. If your current well is insufficient to meet your current demands, you can either have a new well drilled or expand your existing well. Stavens specializes in a process know as **Hydrofracturing**, an effective method for increasing well output. Hydrofracturing puts your well under high pressure causing the well seams to fracture, which allows additional water to flow to your pump.

Geothermal Systems reduce energy and maintenance costs as well as carbon emissions while increasing your home value. They also make you eligible for “Green Energy” tax incentives to offset the cost. Stavens, a trusted leader in the field, has the expertise to provide quality geothermal drilling options to customers. They will drill the necessary paths for the installation of an energy efficient geothermal heating and air conditioning system by your HVAC contractor.

We are indeed lucky to have Stavens Bros., here in Willington to serve our needs.
